

## Teinture française

brown boar

Article Code : 0812321

## NEW COLOUR AVAILABLE

### Description :

The TEINTURE FRANÇAISE 50 ml boar brown has just been produced. This colour has been created to complete our range of browns, as the dark brown colour is not dark enough for some users. They will now have the possibility to mix it with the wild boar brown to obtain a darker brown or to use the wild boar brown directly.

We would like to point out that this boar brown is a perfect match for our single-application colour chart and is therefore really very dark as a boar brown should be.

The TEINTURE FRANÇAISE can be used on all smooth leathers with sufficient porosity, suede, nubuck, velvety leathers. It is also possible to dye patent leathers for professionals. However, we recommend that you use the colour black so that you have. One application unit (it is important not to do any preparation or stripping before application on patent leathers). Not suitable for car interiors and some upholstery leathers (treated with resin).

### Instructions for use :

**Preparation:** On smooth leather, strip with DECAPANT SAPHIR (Réf.0844).

#### Application:

1. After stripping, and in order to check the porosity of the leather, it is advisable to wet the leather generously to see if the water penetrates.
2. In general, it is easy to see with the naked eye whether the pores of the skin are open or completely closed.
3. Take the glove and with the help of the swab, spread the TEINTURE FRANCAISE.
4. Repeat the operation if necessary to obtain a covering and homogeneous tint
5. Dry for 1 hour

### Size and capacity :

**Capacity:** PET bottle labelled - 50 ml

**Jar size:** Diameter 45 mm, height 70 mm
